DOB: 17/03/1986
Driving license: Yes
Nationality: British

PERSONAL SUMMARY

Passionate JavaScript developer with a rich and balanced background.

After 7 years working with web technologies of all types, I took 6 months out of work, studying to specialise in the one which has been of most interest throughout my career – JavaScript.

I will be a valuable and flexible asset to any team requiring a high quality JavaScript skill-set.

WORK EXPERIENCE

JDWilliams.co.uk – Manchester
WEB DEVELOPER

March 2012 – September 2015

Initially tasked with bringing the company's overstretched Celebrus POC up to scratch, and eventually building a team around this successful work, I moved into the Web Development team where I quickly established myself as the go-to person on several front-end subjects – in particular JavaScript.

Duties:

- Technical lead of the Web Analytics Team
- Developing new features, both front-end & back-end
- Liaising with business reps - interpret and formalise requirements
- Managing expectations & resolving conflict
- Rapid analysis in order to deliver estimates on bug fixes / enhancements
- Working with developers and administrators of the full stack

Celebrus – Berkshire
CUSTOMER SUPPORT TECHNICIAN

December 2009 – March 2012

Celebrus is a web analytics application who's USP is it's single file page tracking & detailed business reports.

The support desk at Celebrus was an excellent introduction to the real world of product ownership. The job exposed me to the web front end, & developed a set of interrogatory skills which are still useful to this day.

Being a small support team of between 3 and 6 people, we were each expected to have a working understanding of the functionality of the entire product, including JavaScript event handling, transmission & reception of this information through TCP, it's storage in MySQL, Oracle & Teradata databases and the myriad of issues which can arise from within or between any of these nodes.

ACADEMIC QUALIFICATIONS

MSc (Hons) Merit
University of Leeds

Bioinformatics
2008 – 2009

BSc (Hons) 2:1
University of Leeds

Artificial Intelligence & Philosophy
2004- 2008

A levels
Park House School - Newbury
